Statement on Parks Canada's 2025 AIS Monitoring Result in Clear Lake

Fairness for Clear Lake is happy to see that Parks Canada has published their zebra mussel monitoring results for 2025.

The results are not surprising. Zebra mussels are established in Clear Lake, confirming that remediation is not possible. In fact, these test results reinforce the benefits of a One Boat, One Lake policy to prevent the spread of zebra mussels to other bodies of water.

We look forward to engaging further with Parks Canada as they approach their watercraft management decision for Clear Lake in February 2026.
